Vladyslav

• Middle NodeJS Developer • 4 Years Experience • Intermediate English Level

Professional Summary

Middle JavaScript/TypeScript developer with a strong backend focus, with a proven track record of delivering top-notch applications, I bring a wealth of expertise in building high-performance APIs, optimizing server-side code, and leveraging the latest technologies. Experienced with Node.js, NestJS, Express as well as modern frontend React framework.

Tech Skills

Nest.js | PostgreSQL | TypeScript | MongoDB | ExpressJs

Prisma | BullMQ | Node.js | Docker | Redis

JavaScript | GCP Cloud Storage | AWS | Websocket | React

Secondary Skills

git | Gitlab CI | Stripe(payment) | HTML & CSS | Vite | TailwindCSS | Jest

PayTabs | Printful | SendBird (out of the box Chat solution), | Stability.ai | Jira

Swagger | nodemailer | Postman | Prettier | JWT | Cursor

Key Achievements

- **Proficiency in Software Development**

Developed RESTful APIs, implemented authentication systems, and optimized database queries for enhanced performance. Working independently, I provided tailored Node.js solutions for clients across different industries. I developed custom APIs, implemented data processing pipelines, and ensured high-performance standards were met. Implemented Apple/Google wallet passes. Implemented and integrated payment solutions using Stripe and PayTabs APIs.

Technical Guidance and Mentorship

Conducted code reviews with a focus on readability, maintainability, and performance. Assisted teammates with resolving technical issues and shared practical solutions to help improve day-to-day development efficiency.

Last Projects Engaged

Under NDA

This project focuses on diagnosing diseases in children and parents.

Technologies

NodeJS, TypeScript, Javascript, AdminJS, GetStream IO, Bull, CustomerIO, Prisma, PostgreSQL, AWS S3

Features

- Developed a scalable admin panel using AdminJS with custom React-based components, enabling efficient management of users, groups.
- Designed and integrated a real-time chat system using GetStream.io, supporting instant communication
- Implemented Customer.io for advanced behavior-based email automation, including onboarding flows, reminders, and personalized notifications based on user activity.
- Built and optimized multiple background job pipelines using Bull, handling tasks such as notifications, data processing, and scheduled workflows with retry and failure handling mechanisms.
- Designed RESTful APIs and ensured secure data handling.
- Optimized database queries and schema design with Prisma and PostgreSQL to ensure high performance and scalability.

Under NDA

B2C platform for generating images, ordering and delivering the physical pictures to the end-customer.

Technologies

NodeJS, TypeScript, Javascript, NestJS, StabilityAI, Stripe, Printful, Prisma, PostgreSQL

Features

- Implemented AI-powered image generation using StabilityAI API, allowing users to create custom images based on prompts with configurable parameters.
- Integrated Printful API to automate the full order lifecycle, including product creation, order submission, status tracking, and delivery updates.
- Built a seamless payment flow using Stripe, supporting one-time payments with secure checkout, webhook handling.

- Developed backend services with NestJS to manage user sessions, order processing, and communication between third-party services.
- Optimized database interactions using Prisma and PostgreSQL, ensuring efficient storage of user data, orders, and generated assets.

NPA Delivery: Node.js

Provides various educational programs that help to get up-to-date skills, achieve professional goals, and increase value in the global tech market.

Technologies

Nest.js, React, MongoDB, Redis, Socket.io

Features

- Designed and implemented dynamic skill review pages using NestJS and React, improving user engagement and knowledge tracking.
- Built scalable RESTful APIs.
- Implemented caching strategies using Redis to enhance system scalability and reduce server load.

Under NDA

Offline/online education

Technologies

JavaScript, TypeScript, NestJS, NodeJS, Postgres, TypeORM, Redis, Bull, Swagger, SendBird (out of the box Chat solution), AWS S3, GCP Cloud Storage

Features

- Developed a real-time chat and messaging system using Sendbird, enabling seamless communication between students, tutors and mentors.
- Designed and implemented background job processing with Bull for handling asynchronous tasks such as notifications and data processing.
- Built and documented REST APIs using Swagger for easier integration and team collaboration.
- Integrated cloud storage solutions (AWS S3, GCP) for secure and scalable file management.
- Improved system performance through Redis caching and efficient database indexing.
- Implemented role-based access control (RBAC) to manage permissions for students, instructors, and admins.

Under NDA

School CRM

Technologies

NestJS, NodeJS, Javascript, TypeScript, Prisma, PostgreSQL, Passkit-Generator, AdminJS

Features

- Implemented Apple Wallet and Google Wallet pass generation, enabling digital ID cards and passes for students.
- Designed efficient database schemas using Prisma to ensure data consistency and scalability.
- Built some admin pages using AdminJS for easy management of users, data, and workflows.

Project Under NDA

Develop booking application

Technologies

NodeJS, NestJS, Javascript, TypeScript, PostgreSQL, Prisma, Brevo, PayTabs,

Features

- Applied Domain-Driven Design (DDD) principles and clean architecture to ensure maintainability and scalability.
- Integrated PayTabs payment gateway for secure and reliable online payment processing.
- Implemented email notifications and transactional messaging using Brevo.
- Optimized database performance with Prisma and PostgreSQL
- Added validation and error-handling layers to enhance system reliability and user experience.
- Added API endpoints for booking management, authorization, admin dashboard, packages, services.

APR, 2025 – NOV, 2025
